RATING RATIONALE

Our 'A-' long-term issuer rating on Norway-based Jæren Sparebank reflects the bank's strong capital position, low risk appetite and the favourable position in its local operating market. The bank has a cooperation agreement with the Eika alliance, which we view as positive, as it provides product diversity, shared IT costs and the opportunity to finance residential retail mortgages through Eika Boligkreditt. We expect the bank's core earnings to improve over the next few years, due to higher interest rates leading to increased net interest margins. We also expect costs to be stable over the next few years, with lower costs associated with the new IT system offsetting inflation in other areas. This results in improved earnings metrics in our projections, despite higher projected credit losses.

The rating is constrained by the bank's concentrated exposure to real estate and agriculture in the region of South Jæren in the county of Rogaland, on the west coast of Norway. Rogaland's key role in Norway's oil and gas production makes the region's economy more volatile than the national average, but has also created a strong economy with low unemployment.

STABLE OUTLOOK

The outlook is stable, reflecting our view that the weakening economic climate will be offset by improvements in capital and earnings metrics as interest rates increase, despite higher projected credit losses. We believe the bank's low risk appetite, strong liquidity position, improved earnings and stable cost position provide resilience to a moderate slowdown in the economy.

POTENTIAL POSITIVE RATING DRIVERS

• Improved capital and earnings, with a common equity Tier 1 (CET1) capital ratio sustainably above 22% and pre-provision income sustainably above 3.0% of the consolidated risk exposure amount (REA).

POTENTIAL NEGATIVE RATING DRIVERS

- A material deterioration in the local operating environment that negatively affects the bank's asset quality.
- A sustained reduction in the CET1 capital ratio to below 18% and risk-adjusted earnings metrics sustainably below 2.0% of REA.

ISSUER PROFILE

Jæren Sparebank was formed in 2015 from the merger of Klepp Sparebank and Time Sparebank, which dated back to 1923 and 1911, respectively. Today, Jæren Sparebank's main office is located in Bryne, while the bank also has offices located at Klepp, Varhaug and Ålgård. The bank operates as an independent savings bank and has equity capital certificates that trade on the Oslo Stock Exchange.

Jæren Sparebank operates in Rogaland County, with a focus on the Southern Jæren region, which consists of the municipalities of Klepp, Time, Hå and Gjesdal, where the bank opened a new branch in January 2022. The Southern Jæren region has a population of around 75,000, a strong projected growth rate and very low unemployment levels. These markets are within commuting distance of the Northern Jæren cities of Stavanger and Sandnes, which are vital markets in Norway's oil industry and Norway's third-largest municipality.

The bank is a part of the Eika alliance, an association of over 50 small and medium-sized Norwegian savings banks. The association provides product diversity, shared IT costs and the opportunity to finance residential mortgages via Eika Boligkreditt, Norway's fourth-largest issuer of covered bonds, with outstanding bonds of over NOK 100bn.

OPERATING ENVIRONMENT

Operating environment assessment 'a-'

National factors 'a'

We consider a balance of national and regional factors in our assessment of the operating environment. Jæren Sparebank's operations are highly concentrated in Rogaland County, more specifically the Southern Jæren area consisting of Hå, Time and Klepp, and the county is exposed to the volatile oil and gas market. However, this exposure has resulted in a strong economy and a low unemployment rate in the region. Southern Jæren is also exposed to agriculture, which has relatively lower risk.

Lower economic activity in Norway, moderate recession possible in 2023

Despite the expectation of lower economic and housing market activity, we anticipate that Norwegian banks will benefit from increasing interest rates. We expect the economy to slow in 2023 as the country adapts to higher energy and living costs, combined with rising interest rates. However, strong public finances support our outlook for the wider banking sector, and the government has implemented an energy price relief system for households.

Norway's rate of inflation remains exceptionally high, at 7.5% in October 2022. Food price inflation somewhat lagged that of other Nordic countries initially in 2022 due to differences in price-setting mechanisms, but is expected to catch up. Norway has an exceptionally low level of unemployment, at only 1.6%. The Norwegian central bank was relatively quick in raising interest rates, reflecting the temporary nature of the low rates in the wake of the pandemic. We expect the central bank to continue with modest rate increases into 2023.

Norway is at less risk of a recession than European peers, in our view, but economic activity is slowing and this is highly likely to continue in 2023. In particular, the housing and commercial real-estate markets are cooling down after a period of very strong price appreciation. As we expect both prices and volumes to continue to decline into 2023, lending growth for regional banks should decrease, as mortgage-related lending remains the primary exposure in the banking sector.

Jæren region is a growth market with very low unemployment

The municipalities in Southern Jæren account for approximately 60,000 of Rogaland County's population of 485,000. Population growth in the region has been in line with the Norwegian average over the past 10 years, at around 1.1% per year, and the government projects the region's growth to follow the national average through 2050. At 1.5%, the region's unemployment is lower than the national average of 1.6%, according to Norwegian Labour and Welfare Administration.

The economy of Jæren Sparebank's operating region is highly dependent on the oil and gas industry, and the largest employer in Rogaland is Equinor, 67% of which is owned by the Norwegian government. Around 65% of industry workers are employed in the oil and gas sector (2019), increasing the impact of oil price volatility on the region. In recent years, the renewable energy sector has become more important, especially the development of wind power in the Jæren area. Rogaland County is also one of the largest distributors of hydropower in Norway. In addition, the Jæren area is key to the country's farming and agriculture industry, which is reflected in the share of agricultural exposures in the bank's loan portfolio.

RISK APPETITE

Risk appetite assessment 'a'

Capital 'a+'

Regional, sectoral, and

cross-border factors

'bbb+'

Jæren Sparebank's risk profile assessment reflects the bank's strong capital and liquidity buffers, large share of low-risk exposure to the residential mortgage and agriculture markets, and its ability to transfer loans to Eika Boligkreditt. The bank has a high regional concentration in Rogaland County, but the county has a low unemployment rate.

Low risk appetite and adequate limit setting

Risk governance 'a-'
In our view, Jæren Sparebank's risk governance framework, risk appetite, limit monitoring, and risk reporting is in line with larger Nordic savings banks and is considered above average compared to savings bank peers. Furthermore, the bank has well-defined guidelines to support anti-money laundering (AML) in its daily operations, which reduces the risk of related losses and fines which have been levied on some banks by the Norwegian regulator.

The bank is improving its sustainability efforts and reporting. Thus far, it has established credit-related guidelines to assess climate and sustainability risks for its corporate and agricultural customers. It is also establishing a green bond framework and offering incentivised green loans for residential mortgages, farming and electric vehicles. It is environmentally certified by Miljøfyrtårn/Eco-Lighthouse, which provides criteria and structure to minimise banks' environmental footprint, products and solutions. The cooperation with the Eika alliance provides additional resources for future development in this area.

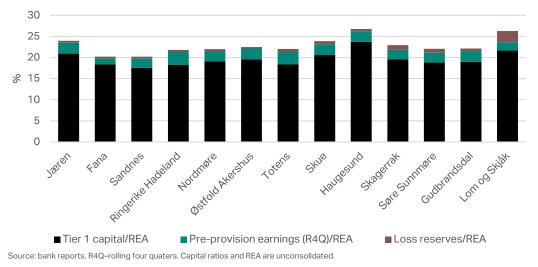

Capital ratio improvement due to SME rebate phase-in, and stable forecast

Our capital assessment considers the bank's consolidated capital position, including its proportionate holdings of Eika Gruppen and Eika Boligkreditt. Jæren Sparebank's common equity Tier 1 (CET1) ratio was 18.2% as of 30 Sept. 2022 (18.9% including 50% of profits year to date) and we believe it will improve and remain above 19% through 2024. Improved capital ratios in 2022 reflect the inclusion of the SME rebate. We consider NOK 149m in additional Tier 1 instruments, with NOK 49m included in the consolidation, as loss-absorbing, which supports our capital assessment. We expect the Tier 1 ratio to remain above 20% through 2024 versus 19.6% at 30 Sept. 2022 (20.5% including 50% of year-to-date profits). The bank had a leverage ratio of 8.2% as of 30 Sept. 2022, excluding year-to-date net profits (9.9% at year-end 2021), compared with a regulatory requirement of 5%.

The CET1 ratio was well above both the minimum requirement of 13.4% and the internal CET1 target of 17.0% as of 30 Sept. 2022. In addition, the projected ratio is also much stronger than the CET1 requirement of 15.9% from 31 Mar. 2023, including an additional 1.5% systemic risk buffer (4.5% in total from year-end 2022) and an additional 1% countercyclical buffer (2.5% from 31 Mar. 2023).

We expect Jæren Sparebank to expand its on-balance-sheet loan book by 3.0%–4.0% in 2023 and 2024. As a result of rising interest rates, we see the bank's net interest margin improving to 2.0% towards

2024 (2.4% of net loans). We believe this will result in a return on equity of between 9.0% and 10.0% through 2024. In addition, we expect the bank to deliver a stable dividend pay-out ratio of 60% until 2024. The potential to reduce this dividend provides capital flexibility, especially given the bank's lower historical pay-out ratio.

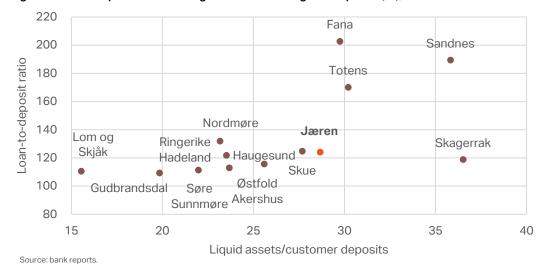

Relatively diverse funding and strong liquidity buffers

Funding and liquidity 'a'

Jæren Sparebank's funding and liquidity position is relatively strong, with a stable retail deposit base and demonstrated access to capital markets. A minor decrease in lending and strong deposit growth in recent years has driven the loan-to-deposit ratio down to 123% as of 30 Sept. 2022, from 137% at year-end 2018. The bank maintains strong liquidity buffers, at nearly 24% of customer deposits, and has access to a NOK 300m credit line from DNB. As of 30 Sept. 2022, the liquidity coverage ratio was 311%, well above its internal limit and historical average of around 200%. The bank's net stable funding was 143% at the end of 2021, in line with recent reported levels and well above the internal limit. We expect Jæren Sparebank to maintain strong regulatory measures, given internal limits.

Jæren Sparebank had NOK3.3bn in outstanding in senior bonds as of 30 Sept. 2022. The debt maturity profile is evenly distributed, with senior unsecured maturities spread out over 2023 to 2027. Our forecast expects the bank to refinance through new bond issuances at maturity and we note that the bank repurchased NOK 50m of its NOK 360m bond, which matures in February 2023.

Another important source of funding for Jæren Sparebank is its cooperation with Eika Boligkreditt. Eika Boligkreditt is a stable and important source of funding for the bank and provides access to more affordable funding with longer terms to maturity than it can achieve by itself. Jæren Sparebank increased its transfer ratio to Eika Boligkreditt to 40.9% as of 30 Sept. 2022 (from 39.3% at year-end 2021) and is approaching its 45% internal limit.

Credit risk

Credit risk 'bbb'

The bank's loan portfolio is also highly regionally focused, with 96% of its lending extended to borrowers in Rogaland County. About 80% of Jæren Sparebank's exposures are to private and agricultural customers and secured on housing and agricultural properties, adding to the concentration on its local market and linking collateral to declining property values. Housing prices and real-estate values in Rogaland are falling in line with the Norwegian market as interest rates rise, but the region has historically maintained low unemployment despite periods of volatility relating to the oil and gas industry. Housing price growth over the past decade has strengthened the bank's collateral.

The oil and gas industry is a major employer in the region. While the bank is not a direct lender to oil and gas companies, a number of the bank's exposures are to suppliers or individuals working in the industry, exposing the bank to volatility in this sector. However, strong social safety nets and agricultural industry regulation mitigate much of the oil industry-related risk in the bank's loan book. The exposure to farmers exposes the bank to significant climate events and flooding in the region's lakes or waterways, as evidenced by the very dry summer in 2018, which affected farming operations and crops.

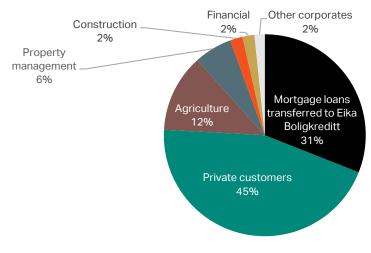

Figure 5. Jæren Sparebank net lending by segment, including transferred loans, 30 Sept. 2022

Source: company.

The bank had loan growth of 4.3% over the last 12 months, but saw declining loan volumes on its own balance sheet in the third quarter. Our forecast includes loan growth on the bank's balance sheet of between 3% and 4%. Jæren Sparebank has increased the share of residential mortgage loans transferred to Eika Boligkreditt during 2022 in response to increased funding costs and is likely to

continue to do so until interest rates stabilise, which we expect in 2023. As of 30 Sept. 2022, the bank had NOK 6.0bn in transferred loans, which provides commission income. The bank does not offload its risk for these loans, however, and is expected to take back nonperforming loans from Eika Boligkreditt to maintain a clean cover pool. Where repatriation of loans is not possible, which has yet to occur, Jæren Sparebank guarantees 1% of transferred loans and covers 80% of any net loss occurred by Eika Boligkreditt, with charges netted from commission payments for transferred loans.

Other risks

Other risks 'a'

We do not believe market risk is a material factor for Jæren Sparebank, given the lack of a trading portfolio, and its low limits on interest rate risk and currency risk. The bank uses interest rate derivates for hedging purposes.

Jæren Sparebank has strategic ownership positions in Eika Gruppen (4.9% at year-end 2021) and Eika Boligkreditt (5.9%), which provide access to the Norwegian covered-bond market, insurance, asset management, a real-estate agency and credit products, and ensure a strong a voice alongside the other savings bank owners. This ownership also contributes to the bank's earnings through dividend payments, as well as commission paid on transferred loans and savings. In addition, the bank owns 40% of real-estate brokerage business Aktiv Eiendomsmegling Jæren AS. The remaining shares are owned by Sandnes Sparebank.

COMPETITIVE POSITION

Competitive position assessment 'bbb-'

Jæren Sparebank has a local focus and a strong position in its core markets. The bank is the market leader for private customers in the region, with a market share of 27%. This is distributed between a market share of 36% in Klepp, 38% in Time, and 20% in Hå. Competitors with national coverage have reduced their branches and coverage in Jæren Sparebank's core markets, leading the bank to open a branch in Gjesdal in January 2022. The new branch has a current market share of 6% in Gjesdal, but is growing due to its local presence. In the corporate segment, Jæren Sparebank is mostly concentrated around agriculture, which makes up 18% of the loan portfolio and reflects the bank's 43% market share within agriculture in the region. The bank's main local competition comes from Sparebank 1 SRbank, Sparebanken Vest and Sparebanken Sør, which are regional banks that cover a broader area of Norway.

The bank is the third largest in the Eika alliance, which expands the bank's customer offerings beyond what it could provide itself and diversifies revenues. Via Eika, the bank provides customers with insurance, debit and credit products, asset management and a real-estate agency.

As the bank is so concentrated around its core markets, we consider Jæren Sparebank's meaningful role in and contributions to its local market as a positive rating factor. The bank's primary environmental, social and governance (ESG) attribute is its strong sense of social responsibility in its local communities. The bank also funds social and cultural activities to support its local community.

Jæren Sparebank also distributes customer cash dividends according to the size of customers' loan and deposit balances throughout the year. The bank views this as a strategic way of securing long-term value creation. It generates loyal customers and, to some degree, makes it more difficult for other banks to capture market share from Jæren Sparebank. We therefore believe this arrangement further strengthens the bank's local competitive position.

PERFORMANCE INDICATORS

We expect Jæren Sparebank's core earnings to improve in the coming years due to higher interest rates Performance indicators increasing net interest margins. We also believe the bank's costs will remain stable over our projected period. We therefore expect these improvements to offset an anticipated increase in loan losses due to a slowdown in the overall economy.

Earnings

Earnings 'a'

assessment 'a-'

We expect rising interest rates to significantly improve Jæren Sparebank's net interest margins following years of margin pressure due to low interest rates and competition for mortgage loans. We therefore believe the net interest margin will increase to 2% in 2024. In addition, we expect rising

interest rates to improve margins on loans transferred to Eika Boligkreditt from 2023, despite falling during 2022 due to the rapid rise in interest rates. Another important source of income for the bank is dividends from the Eika Gruppen and Eika Boligkreditt, which we expect to improve somewhat over the next few years for similar reasons.

We forecast Jæren Sparebank's costs to fall in 2023, due to lower costs associated with the new IT system implemented in 2022. The combination of improved income and a stable cost base leads us to project a core cost-to-income ratio of 43–45% in 2023 and 2024, compared with 51% in 2021. This will also result in an improvement in core risk-adjusted pre-provision income (PPI) to REA to 2.1%–2.3% in 2023 and 2024.

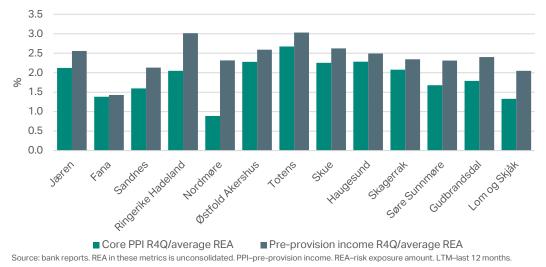

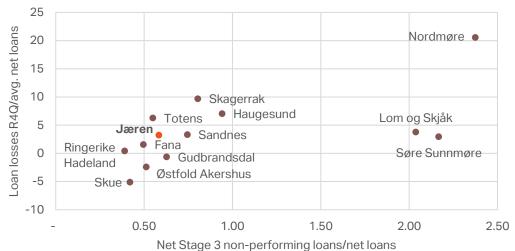

Figure 6. Norwegian savings banks' PPI to REA, LTM to 30 Jun. 2022

Loss performance

Loss performance 'a-'

Jæren Sparebank reversed NOK 2.8m in previous loss reserves in the first three quarters of 2022, compared with NOK 2.4m in net reversals in 2021. We project an increase in loan losses in 2023 and 2024 as the economy slows, but note that the bank maintains a NOK 9.5m general reserve from the COVID-19 pandemic that serves as a buffer for new reserves. We also anticipate that the bank's stage 3 loans will increase in line with an economic slowdown and project net stage 3 loans increasing towards 1% of net loans by 2024 in our base case. However, we expect the bank to continue to remain within the range of its domestic peer group.

Moderately positive aggregate ESG impact

ENVIRONMENTAL, SOCIAL AND GOVERNANCE FACTORS

Environmental, social and governance (ESG) factors are considered throughout our analysis, where material to the credit assessment (see Figure 8). On aggregate, we view the bank's ESG profile as having a moderately positive impact on its creditworthiness.

Figure 8. Jæren Sparebank priority ESG factors

lssue/area	Risk/opportunity	Impacted subsections (impact on credit assessment*)
Physical climate risk to collateral	Climate-related damage to real-estate and agricultural collateral (closely linked to supervision of insurance). Longer-term effects on market values in flood risk areas.	Credit risk (-) Loss performance (0)
Social engagement in local community	Close connection to narrow regional markets provides a benefit.	Competitive position (++) Earnings (+) Funding & liquidity (+)
Anti-money laundering capacity	Risk of sanctions and fraud due to insufficient control of customers.	Risk governance (0)
Control of sustainability issues	Risk of overlooking sustainability impacts in the bank's underwriting, operations, and customer base.	Risk governance (0) Credit risk (0)

*Defined on a 5-step scale ranging from double minus (--) to double plus (++), with (--) representing the most negative impact and (++) the most positive. See ESG factors in financial institution ratings.

ADJUSTMENT FACTORS

Support analysis

Support analysis neutral

We view Jæren Sparebank's ownership as supportive of our standalone credit assessment, but do not make adjustments to reflect this support. The two foundations that control 63.2% of the bank's equity capital certificates (ECCs) have stated the purpose of their ownership to be the long-term and stable ownership of the bank. This is to ensure a solid, locally focused savings bank in the region. We believe both foundations have available liquidity to participate in a future ECC issuance. In addition, both foundations distribute profits to support the local community in the respective areas. This further strengthens Jæren Sparebank's local presence.

Owner	Share of ECCs

ISSUE RATINGS

Our rating on Jæren Sparebank's unsecured senior debt is in line with the 'A-' issuer rating. We expect to assign 'A-' ratings to future issues under the bank's medium-term note programme. The bank has an outstanding Tier 2 instrument and an additional Tier 1 instrument, which we rate one and three notches below the issuer rating, respectively. Consequently, the Tier 2 instrument is rated 'BBB+', while the Tier 1 instrument is rated 'BBB-'.

All information and data used by NCR in its analytical activities come from sources the agency considers accurate and reliable. All material relating to NCR's analytical activities is provided on an "as is" basis. The agency does not conduct audits or similar warranty validations of any information used in its analytical activities and related material. NCR advises all users of its services to carry out individual assessments for their own specific use or purpose when using any information or material provided by the agency. Analytical material provided by NCR constitutes only an opinion on relative credit risk and does not address other forms of risk such as volatility or market risk and should not be considered to contain facts of any kind for the purpose of assessing an issuer's or an issue's historical, current or future performance. Analytical material provided by NCR may include certain forward-looking statements relating to the business, financial performance and results of an entity and/or the industry in which it operates. Forward-looking statements concern future circumstances and results and other statements that are not historical facts, sometimes identified by the words "believes", "expects", "predicts", "intends", "projects", "plans", "estimates", "aims", "foresees", "anticipates", "targets", and similar expressions. Forward-looking statements contained in any analytical material provided by NCR, including assumptions, opinions and views either of the agency or cited from third-party sources are solely opinions and forecasts which are subject to risk, uncertainty and other factors that could cause actual events to differ materially from anticipated events. NCR and its personnel and any related third parties provide no assurance that the assumptions underlying any statements in analytical material provided by the agency are free from error, nor are they liable to any party, either directly or indirectly, for any damages, losses or similar, arising from use of NCR's analytical material or the agency's analytical activities. No representation or warranty (express or implied) is made as to, and no reliance should be placed upon, any information, including projections, estimates, targets and opinions, contained in any analytical material provided by NCR, and no liability whatsoever is accepted as to any errors, omissions or misstatements contained in any analytical material provided by the agency. Users of analytical material provided by NCR are solely responsible for making their own assessment of the market and the market position of any relevant entity, conducting their own investigations and analysis, and forming their own view of the future performance of any relevant entity's business and current and future financial situation. NCR is independent of any third party, and any information and/or material resulting from the agency's analytical activities should not be considered as marketing or a recommendation to buy, sell, or hold any financial instruments or similar.
